DUCT SEALING

HOW IT WORKS

Air ducts distribute centrally cooled or heated air throughout your home. Leaky air ducts can reduce heating and cooling efficiency by as much as 20% and cause rooms to feel too hot or cold. The specialist will measure how much air is leaking from your duct system and repair common duct problems including:

- A.** Leaky, torn, and disconnected ducts.
- B.** Poorly sealed registers and grills.
- C.** Leaks at furnace and area around the filter.
- D.** Kinks in flexible duct work restricting airflow.

WHAT TO EXPECT

- The specialist will close all the air vents and attach a tool that blows air into the ducts to measure how much air is leaking.
- Repairs are made to the air duct system and then it is re-tested.
- The service takes roughly two hours to complete.
